Profile

Senior programmer with 16 years experience building end-to-end systems. Superior proficiency with Ruby on Rails. Excellent SQL skills. Proficient with browser technologies. Dynamic, creative problem solver. Consummate mentor. Passionate and highly motivated.

Experience

SENIOR SOFTWARE ENGINEER, POWERSUPPLY COLLECTIVE, INC. WASHINGTON, DC PRESENT

PowerSupply delivers great food prepared by local chefs to health focused locations such as gyms. I was the lead developer. I designed and developed the solution of managing the variable subscriptions of the orders, tracking for order fulfillment, meal and menu creation and curation as well as order modifications.

FREELANCE RUBY ON RAILS DEVELOPER SEATTLE, WA 2012-2014

I brought a very versatile background with tons of service development, leadership, and end-to-end development to the table as a freelance developer. Projects included an in-house recurring subscriptions engine with built in fulfillment platform, an employee relocation assist platform, and a closed social network platform for professional conferences.

SENIOR SOFTWARE ENGINEER, TAPPIN SEATTLE, WA 2011 - 2012

Tappln provides a solution to securely access files on your computer from your devices or from a web browser over the internet. I was the lead Ruby on Rails developer and oversaw the database. A ton of technologies were in play, WebDav was the common protocol used throughout the stack.

SENIOR SOFTWARE ENGINEER, APOLLO GROUP SEATTLE, WA 2009 - 2011

Apollo Group is the company that owns the University of Phoenix. I designed and built a replacement for their live chat solution that integrated with a collection of legacy systems on the backend to perform CRM activities.

SENIOR SOFTWARE ENGINEER, WETPAINT.COM, INC. SEATTLE, WA 2007 - 2009

Wetpaint has pivoted their business model since I was there but back then they had a 'create your own wiki' platform similar to wikia or media wiki. I was a senior developer on the service layer/database. I also mentored more junior members of the team.

REMOTE FREELANCER 2006 - 2007

Worked on a variety of projects including training/knowledge base software, a photo access web site, development of a web framework, and various Facebook applications.

SENIOR SOFTWARE ENGINEER, RCI PARSIPPANY, NJ 2001 - 2003 : 2005 - 2006

Spent two tours with RCI. We had some interesting problems to solve, basically providing a unified web-based reservation system that was backed by several disparaging legacy mainframe systems. Some of the systems valued inventory with currency, some with arbitrary points based systems. Some tracked inventory in weeks based blocks, some in day based blocks.

SENIOR SOFTWARE ENGINEER, MERCEDES-BENZ USA, LLC MONTVALE, NJ 2003 - 2005

Worked on their client-server dealer application suite.

Some Skills

Ruby, Rails, BDD/TDD, Object Orientated Design (GoF perspective), SQL, HTML, JavaScript, CSS, REST, Java, UNIX/Linux, jQuery, Git, Objective C/Cocoa, SVN, HTTP
